III. MEZINÁRODNÍ KONFERENCE

„ZDRAVÍ LIDSTVA“

International PSY-ACADEMY

Česká a Slovenská Republika

Člen Mezinárodní profesionální medicínské
Asociace specialistů komplementární a národní
medicíny, psychologů a léčitelů

Program:

3. 7. Testování

4. - 5. 7. Konference

6. - 8. 7. Navštívení lázní

Organizační rada:

Předseda: prof. MUDr. **Alla Kulikova**, CSc, (Česká Republika)

Místopředseda: Mgr. **Jan Maria Joza** (Česká Republika)

Členové organizačního rady:

Andrej Li, profesor medicínských věd (Rusko)

Ignat Ignatov, Dr., fyzik – (Bulharsko)

Josef Hrušovský, MUDr., homeopat (Česká Republika)

Valerij Krišněv – (Bělorusko)

Christos Drossinakis – (Řecko)

Georgy Tyminsky – Dr. (Německo)

The Evolution of the Consciousness in the New Millennium

The science has been coming on regarding the existence of competitive systems. Religion, science and philosophy at present cant catch up the business, but everybody tries. By this way, the civilized society is found quite at the beginning on the way to the development but unfortunately based on the material world. But we are approaching to the Big Quantum Transformation and our brake of misunderstanding damages the awareness of the coming period on the planet.

The way to the awareness goes through the education system of the theoretical and practical education of the Spirit Universities that have big experience with the creative work of last and present lives. The man formation begins at the age of 70 to 80 years of the life, but at this age the organism is not able to fulfill a range of functions and the body gets old. We can see that the society is not able to retain the physical state of people and hence the brain potency falls owing to the inside conflicts without revealing his abilities.

It is a significant loss for man. Yes, man is not perfect. We specialist are aware of these factors and conclude that it is necessary to solve the material sides by another way, the way leading to the providing knowledge to people longing for information. In regard of the planet transformation to another level, the talented persons should be supported. The healers belong to them as well and represent everyday self-sacrifice.

But the self-preservation instinct, experienced work with the planets, the continual spiritual education should ensure the possibility of reaching the fourth proportion at least. Personal longtime education with concrete awareness of the activity is needed. The teachers of the Spiritual Schools should have knowledge and practice experience of getting on higher levels of consciousness. The temporary science is not ready for teaching at these levels and finds itself in the flowing phase. The special /secret/ knowledge is handing over on the line of pupils and is always closed for the publicity.

The healer brings the patients either to the complete cure or provides the short-time help or has continual control over the ill patient for many years which leads to the personal responsibility for the performed work.

Hence it is important to rule over the old DEP knowledge – the distance energetic treatment: to know kinds of influences, variety of forms and levels according to the possibilities.

Without controlling the PSV /transformation of the state of consciousness/ on the level of understanding the action, the healer hazards with the patients and risks his own life as well. Some scientists philosophizing the topic of the transformation of the state of consciousness show the level of their full incompetence in the given field of knowledge by trying to show the consciousness pathology.

The space of Universe is not divided. Man is not able to accept the idea of the wholeness of the world: the Cosmos and Man are unit, similar and adequate according to the structure. The result is that the distance has no importance for the information transfer because the all world is in one point. And the past, present and future are situated in that.

Understanding this gives big opportunities for work of extra-sense, cosmo-therapist, psycho-thronic and so on to take effect on individual and world processes /positively or negatively/. For example it is possible for us to stop the use of nuclear weapons in the world, to realize the correction of the space after a blast and so on. After all, it is our basic work.

From the opposite side, the radioactivity gives the perfect cleanup of the space of the state and brings the inhabitants to a higher level of the energetic balance. The outcome of this

is the show of the negative karma which needs a right and quick reaction and the awareness of the going processes according to the principle of the effect of the “domino” in the future.

Really, the period of opening the secrets is coming and the ways are becoming clearer for the seeking people. But it is necessary to follow the knowledge always with big respect and to continue on the unknown way patiently. It will certainly bring the fruits in the form of a big expansion of your activity and the way out on a higher level of thinking and ensuring the longevity in the future.

*Andrey Lee, D. Kulikov
Rossia, Moskva*

Scientific research of a foundation of integrative medicine

The important part of integrative medicine are spiritual healing and bioenergytherapy. Spiritual healing, a prayer healing, bioenergytherapy and using of other methods of bioenergyinformational actions and eniomedicine includes development of skills of concentration of attention and meditation as a necessary element. Ability of the healer to cause specific changes in physical and biological processes in object of influence are indirectly shown in ability of influence on the generator of white noise. For this purpose we used the generator of white noise on the basis of the sensor which use the noise of semiconductor diode. Originality of a design that the device contains two independent channels which can be simultaneously connected to an input of a sound card of any computer. Thus there is an opportunity to reveal any anomalies on a background of uniform noise signal with using of the correlation analysis.

As the program of the spectral analysis we used the specialized program “Quantum Brain Sensor” for specific analysis of a noise signal. The signal is displayed in an on-line mode, and in process of accumulation the data write down in the file. On the screen of the monitor the opportunity of a feedback for the healer is given. The design is rather simple, that makes its accessible for a wide range of scientists-experts and nonspecialists. Appearance of the sensor is presented on figure 1.

As a result of research we receive two kinds of dependences. The first kind of dependences (preliminary results) received directly during experiment. Results of experiment were displayed in real time on monitor and could be used as a feedback. The example of dependence of the first kind is presented on figure 2. On a horizontal axis - a time of experiment. On a vertical axis: intensity of a noise signal in the first channel (the upper graph), in the second channel (the middle graph), correlation on signal and on dispersions and a relationship of signals in two channels (the lower graph).

The first kind of dependence displayed on the screen of monitor has preliminary character, is not enough informative and does not reflect all depth of influence. Deeper studying of influence spent after the finishing of experiments. For this purpose we used special mathematical processing results of experiment. As a result of detailed processing we received the second kind of dependence. On figures 3 and 4 the results of such subsequent advanced research of results of experiment are presented. Here - on a horizontal axis - time scale, on a vertical axis - a relative power of synchronous noise fluctuations. The level of background fluctuations is indicated on figure by a dotted horizontal line. Everything, that above a dashed line with reliability of 95% testifies to presence of effect of influence. On figures 3 and 4 the examples of influence of well known healer Christos Drossinakis and Alla Kulikova are presented.

The sensor was placed on short-length distance from the examinee (up to 1 meter). The process of experiment was reflected in real time in the form of several diagrams (the example is shown on figure 2) on the screen of the monitor of a computer. This diagram could be used as "feedback" for the examinee. However, the overwhelming majority worked blindly, and the feedback during experiment has not been used. Results became known after finishing of an experiment. The majority of examinees had an opportunity to use some attempts. As a result the examinee got an operational experience with the sensor.

Example of practical use of the detector. Wellknown healer Christos Drossinakis constantly spends the practical training seminars, devoted to spiritual healing. Seminars include development of skills of concentration of attention and meditation. Together with Ch.Drossinakis we have carried out research of abilities of participants of a seminar during their training on one of such seminars which took place in September, 2008 in Greece. All participants of a seminar have shown good results. At many already the first attempts led to reception of significant results. Another needs some time for training to work with the sensor. As a testing lasts a few days, it was possible to study how the results of testing improved during training at a seminar. Results were various and reflected specificity of work of each participant of a seminar. The results received at meditation and at concentration of attention differ. Distinct changes are established at long time measurements (within one day) as the weariness collected. Various kinds of spiritual healing, a prayer healing, meditations have found reflection in results.

FUNDEMENTALS OF SPIRITUAL CYBERNETICS IN THE ASPECT OF ENIOPSYCHOLOGY

Remarkable scientific discoveries of scientists in the areas of physics, metaphysics, psychology and parapsychology, eniology and healing arts made it possible to formulate, on the level of paradigms, hypotheses and theories, the laws of fundamental interactions of torsion and lepton fields in the background of cosmic and Earth ether.

Those discoveries allowed scientists to approach to the cognition and realization of the contensive essence of the subtle (energoinformation) world, physical and metaphysical core of conscience, mentality, as well as to the substances of the spirit of a spiritual soul, the spirit of an animal soul and the spirit of a corporal shell.

Those spiritual recoveries occurred with many earthmen on all continents of the Globe (scientists, religious figures, morally high-developed members of the social community), who strive for the Earth planet spiritualization. The fact, that time has come for the integration and merge of science and religion in search of the truth and meaning of a person's terrestrial existence, is a natural process.

We are pleased to state, that these were the scientists of Russia, who arrived to a conclusion about the existence of the Universe Creator (quoted from the speech of the President of the Russian Academy of Sciences Academician Yu. Osipov).

In doing so, they do not attempt to argue the global postulate of a God Creator's existence, since this, as a reality, is beyond an "earth creature's" understanding; what is more relevant is that blasphemous neglect has moved away from atheism-materialism.

Even for non-Philistines it appeared to be a problem to figure out the Earth planet in the image of the solar system. Only every thirtieth of the respondents was able to show where our planet, 'the Earth', is located. And only every hundredth was able to somehow reason upon his/her staying here on Earth or give a definition to their sense of living. Such utter ignorance, removed unexpectedly away from their "boxes" (computers, TVs, cars), testifies for the prevalence of the brute in our fellow beings (grouped civilized savages). Inhere, in the dominion of hypocrisy and mean brazen lie, there's no place left for spirituality. Each of us is to rise from this spiritual degradation and become an individual, a human being (Spirit in a flesh); however, one can only do this through one's faith in the Heavenly Master Jesus Christ

Nazorey, as well as through realization that only the way of moral purification and perfection can be the essence of our life with its sense, value and purpose.

Some “swift-winged” scientists representing theoretical physics hastened with declarations on acknowledging the Creator, on finding out the phenomenon of human conscience and parapsychology, on getting proofs of the existence of the subtle world, human subtle bodies, psycho-energy; though, it’s actually a mere illusion of approaching the source of our reality. Neither have we got the slightest idea of the physics of the applied laws of nature (magnetism, electromagnetism, gravity, holography, etc.), describing them figuratively or in a formalized manner – we are considerably less knowledgeable about the subtle world. Everyone is familiar with the common truths: “What is underneath is overhead”; “What is in a little scruple is in a big outward”; “Cognize your own self and you will cognize the whole world”.

And this is not surprising, as those physicists-theoreticians ignored the prediction of V.I. Lenin, who in the remote year of 1909 in his scientific paper “Materialism and Empirical criticism” was writing about the probable withdraw of mathematicians-physicists from dialectal materialism.

Since the times of Leonhard Euler all mathematical doctrines have been built up based on irrational numbers and trimmed by “time constants”, which are very far from the physical notions of an ordinary individual. Mathematical idealism in pure form (some titled doctors of “physical mathematical sciences” raise the deceased from the dead, others climb the mountains equipping themselves with an alarm-clock and claiming that their time (i.e. name) is shifting (the one, who set off, had been named “Ivan”, before at last he descended, now as a “Stepan”).

Going back to the figurative saying of V.I. Lenin, “new physics has swerved to idealism, mainly because physicists were ignorant of dialectics” (1, p. 276-277); according to physicists, “matter has gone, only equations have kept” (1, p. 326), since, in fact, the scientists refused to view the physical origin of phenomena.

Instead of making conclusions as to the inner essence of processes, through summarizing multiplied data on various phenomena, physicists started to produce the so-called ‘postulates’, or assumptions, which, in their opinion, nature has to follow.

In the same way, there have been worked out five postulates, taken as the basis for the Special relativity theory (SRT):

- nature having no ether;*
- the principle of relativity (all processes in a system moving uniformly and rectilinearly proceed under the same laws, as in a system at rest);*
- the principle of light velocity constancy (velocity of light in any inertial system keeps constant and is not dependant on the velocity of the source of light);*
- the invariance of a four-dimensional interval, where ‘space’ and ‘time’ turn to be interconnected through the light velocity.*

Yet, in working out the gravitation theory (General relativity theory), Albert Einstein concluded that his theory would still remain incomplete without ‘ether’, and thus introduced the concept of the presence of ether in space, by adding five more postulates to those already existing (SRT):

- all SRT postulates cover gravitation;*
- space and time are correlated with the gravitational field and make it conditional;*
- covariance of the system of equations with regard to conversions;*
- the equality of propagation velocity of gravitation of light velocity;*
- the presence of ether in space.*

The physical world forcedly imagined by mathematicians-physicists does not only stay far from casting light on physical phenomena, but rather leads science into a dead end.

On the other hand, for an atheist-materialist research is only acceptable in its experimental form, having as its purpose rational results with their productive force, like for Mowgli the man-cub, raised in the jungle social medium, who makes use of his sensors of perception: visual, aural, tactile, olfactory, gustatory, and of the ability to ratiocinate, make comparisons and conclusions, acquired through being bred and educated, who, over seventy years, out of ideological considerations, at one or another stage, has rejected genetics, cybernetics, immunology, bioenergetics, parapsychology, and nowadays – eniology and eniopsychology, viewing these branches of science as occult mysticism, on the ground that the said sciences' elements refer to unobservable forms of reality. The following thing is obvious as well – all scientific methods with their devices, aids, instruments, computer machines represent themselves only the ways of persuasion in the observed (perceived) processes' truth, but do not reveal the physics of the process itself.

Nonetheless, there are some “advanced” scientists, who insist on the importance of intuition, afflation and visions, drawn from the depths of subconsciousness during the process of creation, while strictly analytical, logical, rational, as well as critical, intellectual activity, according to them, is a gross energoinformational load on brain convolutions, carrying cerebrum, spinal cord and abdominal brain to a resonance with adjusting them to the problem under solution.

This sort of recompense for the said ‘intellectual’ labor comes from above, through our guardian angels (holy spirits). If the discoveries had been made for the welfare of human spiritual development, then the process was supported by the upper forces, and vice versa.

Outstanding discoveries were made by scientists and clairvoyants in the state of their consciousness being deactivated: atomic structure by Nils Bohr, periodic table by D.I. Mendeleev, the future of humanity by Michel Nostradamus, the termination of the Great Patriotic War by V. Messing, etc. There is every reason to say that new knowledge is drawn out of human subconsciousness (spinal cord biocomputer) by intuition (by means of adjustment to a local information channel of the World data bank), or through afflation (in the proper place at a specified time on the eve of our discoverer's birth on account of a providential Earth mission, i.e. only this erudite, and no one but him).

In the process of intuitive visualizations there occurs motivational penetration of a conscious thought through a barrier into the area of subconsciousness (spinal cord with a computer, connected to the Ecumenical consciousness, i.e. the source of knowledge); in the process of afflation similar penetration occurs spontaneously (as per vital program laid down in a prenatal period).

The existing prohibition complexes against any possible novelties are paradoxical: our mind, using science, is fed with knowledge, claiming from the brain (cerebrum) for its intellect and capacity to understand and recognize (realize) what's going on all around, for the welfare of the ‘earth creature’, i.e. the spirit of an animal soul with its corporal shell. But the demands of the mindset, typical for Mowgli-like social mediums of the civilized jungles, are well-known: this is nothing more than fraud and disinformation, the source of myth-making in science, which push the civilization to the abyss; while subconsciousness is fed with esoteric (veiled) knowledge, where mysticism is the penetration of veiled knowledge into our consciousness.

The civilization structure resembles the intracellular texture of an egg (what is mysterious or veiled with regard to an animal unit is hidden in the yolk, while the egg-white is just a medium, or environment, promoting its development). In the same way, the competence of the brain of a human-being from a Mowgli-like social medium are completely ignorant as compared with the spinal cord knowledge, as it only promotes the development and vital capacity of a corporal shell which houses, and preserves within itself, like a set of nesting dolls, the secret knowledge of a microworld (abdominal brain) and of a macroworld (spinal cord).

This rational, pragmatic intellect of the brain of a Mowgli-like medium's being with its deductive, logical and experimental arguments, stuffed with self-created theories, hypotheses and models, goes on carrying with it disaster and misfortune to all earthmen. The scientific myth "Religion is Dope for People" destroyed not only cultural values in the form of churches, but also that moral stem, which bonded each civilized commonwealth at all times.

Time has come to admit the need for the reunion of scientists' and theologians' efforts for the sake of expanding consciousness and perception of the Universe both in the aspect of physical laws and a more common, many-sided and correct perception of the world and a man.

In terms of eniopsychology, religion was given to humanity by the Higher Intellect, revealing to earthmen, with the aid of Prophets and Preachers by revelation and intuition through meditation, afflation and inspiration of those personalities, the most relevant knowledge of the Spirits of a spiritual and animal soul, the Spirit of corporal shell, the meaning of a human life on Earth in the corporal shell, the structure of Being and beginnings of biological life in the form of the corporal shell, equally as we are taught about the invention of an automobile, which had not existed before. Only ignorant people identify a car with a person inside it, the corporal shell of a person and this shell's Spirit inside himself, this corporal shell's Spirit and the Spirit of the personality inside him, the Spirit of the personality and the Holy Spirit visiting him, when we follow the decalogues of Jesus Christ Nazorey.

"There's an outward life compared with an egg-white, and an inner life compared with an egg-yolk; the life of a social medium is made up likewise: science is its external manifestation, while religion is its inner side". The tendency of some religions to bring the life of a social medium and each individual to a dead-end (saying, the life is given only once, and then it is followed by a "hell" or "paradise", there will be no return to Earth for the evolution of the Spirit of an animal soul) is nothing more than a religious atheistic outlook, which has nothing in common with the Divine teaching of the Spiritual Master Jesus Christ Nazorey.

Our Christian churchmen forgot the words of their Master Jesus Christ Nazorey: "I've come to show the resources of an individual. What is done by me all people can do. And what I am all people will be. These gifts belong to all folks in all lands, as this is water and bread of life"; as well as the words concerning proficient singers: "Where do their talents and this strength come from? Of course, for a single short life, they would not be able to accumulate the quality of the voice, neither the knowledge of the laws of consonance. Is this a miracle? No, it is not. As everything has in its start natural laws. Thousands of years ago these people already put together their harmony and features. And their repeated apparition is for getting knowledge out of sundry manifestations".

Nicolas Roerich, "Altay Gimalaya" (New York: Frederick A. Stokes Co., 1929)

Throughout the long period of confrontation, religion undertook "awkward" attempts to stay close to science. The divine learning of Jesus Christ was reformed shamelessly and unscrupulously (theologian Origen was "rotten" in the underground vault for having propagated reincarnation and impersonation; Old Believers were burnt alive, beheaded and impaled on sharp sticks for their non-observance of reforms relating to masses and devotions, introduced by patriarch Nikon). Well, what right has a bearded and moustached "earth creature" to reform the divine learning of Jesus Christ Nazorey first, and then, to atrociously kill the Christians faithful?

Hence, religion and science equally bear within themselves both good and evil, and time has come for them to integrate for the triumph of freedom and justice, for the welfare of a future spiritualized earthman, who, if not for science, would still remain an antique prayerful recluse, and if not for religion, a monster brute from the civilized jungle, provided with the instinct to devour and reproduce. This is the reason why a human being was given a heart and intellect as one unity, which constitutes a bioresonant contour of the human "ego", used

as a means of communication with the abdominal brain biocomputer holding the information of a microworld and the whole past history, as well as with the spinal cord biocomputer holding the information of a macroworld and of the future (since the spinal cord is provided with a cosmic antenna in the form of a vertebral column, which is functioning in torsion (twist) fields). Let us not forget, that the Earth planet has got a torsion channel, formed by counteracting forces, produced at its rotation with the Venus planet and its satellite, the Moon.

As is shown by experimental research, conscience and matter, on the torsion fields' level, are inseparable, for this is through conscience, where discontinued connection between the Subtle World levels and all fields with their material objects are sustained. This particular idea of unity was being delivered by Pythagor and his followers about 2500 years ago. However, for an atheistic science the question how the information gets into the brain and what sort of processes are going on inside the brain, as well as in the rest organism, still remains an enigma. Having got a certain idea of the human left and right hemispheres' functions (the right hemisphere is responsible for emotions and creative thinking, while the left hemisphere – for logical and abstract thinking), today's man still remains unaware of why the Pharaohs of ancient civilizations used intuition as an instrument of cognition (i.e. the right cerebral hemisphere). This is just because their brain was able to initiate special resonant vibrations in the Earth-surface ether, which up to this day remains to be the source of the constructive energy. And these were them who could create material values and displace with their creative thought the stone rocks.

For our atheistic robots with their logic and left hemisphere intellect, the right hemisphere thought process appears unattainable, as it has not been practiced since the times of their infancy and has kept nonfunctional, the same would happen to Mowgli the man-cub raised by a she-wolf, whose unclaimed left hemisphere areas have become atrophic (to start educating him at the age of 12 is equal to starting the supply of 1000V voltage to your computer, or, otherwise, Mowgli, in a way similar to an electric fuse reaction, will switch off, or Mowgli will die in his effort to comprehend the demand received from our robot atheist).

It gives you an impression there are two personalities: a Mowgli of the jungle and a Mowgli of a social medium (civilized jungle). In one of them the right hemisphere is developed, with its adjustment to what is called intuitive, figurative, or animal (a wolf, hog, deer, bear, etc.), while in the other – the left hemisphere, which is adjusted to what is called material, rational and logical. However, in both cases a human "individual" is absent, as is absent the spiritual basis; though the soul is present, as it is present in a stone (like any other process with an energy field).

Therefore, the leading place in science is to be occupied by its spiritual constituent, which is named ENIOPSYCHOLOGY, and which is based on Spiritual cybernetics.

The introduction of the concept of cybernetics, as a "science of managing" the inferior system (object) by the superior managing system on account of feedback, is in quite a full accord under the interaction of the two quantum-field substances – the corporal shell Spirit of terrestrial origin and the personality Spirit capable of being modulated by the Heavenly Holy Spirit of celestial origin, who landed to fulfill its mission on Earth.

The formation, development and interaction of the two substances inside one corporal shell (either of a male or a female) are distinctly represented by 12 Absolute laws of spiritual self-development:

- 1) The spiritual quantum emitter of the spiritual "ego" of a human race representative (HRR) is formed in the subtle virtual background much earlier as compared with his flesh (here lies the essence of a phenomenon: "They start talking about a person before the one is born").*
- 2) HRR, in the form of a protein-nucleic shell, comes into being provided with a genetic code of a corporal shell form and an individual program of its development*

- (determinate one, free from the will of its corporal soul Spirit (CSS), or stochastic one, dependent on the manifestation of the CSS volitional selfness).*
- 3) *Location and time of the corporal shell coming into being is strictly determined in the social medium (the existence of this law confirms the faculty of some sensitives to predict a birth (or “decease”) event and to foretell events for individuals with a determinate program of development).*
 - 4) *At the time of an individual reaching adulthood, in an HRR the factor of recognized responsibility for his deeds and behaviors before his social medium is activated through the rudimentary Spiritual “ego” (the Spirit of an animal soul) with the “for fear” or “for conscience” motivation.*
 - 5) *During the process of living an HRR exercises interaction, by means of the dialogue with his own self (between the CSS and the manager of the recognized responsibility factor – the animal soul Spirit, ASS) and by means of the dialogue with his social medium through the ASS.*
 - 6) *The ASS’s recognition of the process “I’m thinking of the fact that “I think” moulds the sense of self-sufficiency of a HRR on the level of a Mowgli-like social medium, accustomed to survive in the local medium surroundings.*
 - 7) *The start of an HRR’s formation as a personality is connected with the moment recognizing his own self in the Spirit (the law confirms the appropriateness of the ancient Indian (Sanskrit) word interpretation: in “chelovek” (human-being) ‘chelo’ stands for ‘spirit’ and ‘vek’ – for ‘century’) . /Those beings who do not happen to cross this threshold, are destined to remain biped thinking earth creatures/*
 - 8) *The perception of one’s own self in the Spirit is the first step towards spiritual discernment away from spiritual ignorance, setting oneself free from "spiritual blindness" and turning to understanding, on the level of conscience, of "Who is my "ego" and what is my flesh".*
 - 9) *Making a harmony from among the CSS’s “I want” and the ASS’s “you must” and be pleased with the fact that “what is mine and what I own” is the prerogative of our developed spiritual “ego” (the personality Spirit). /The second step of an HRR along the way of Spiritual ascension forward and upward/*
 - 10) *The personality Spirit’s (PS) program is strictly determined and oriented at the functions and tasks of interaction with a social medium in the aspect of self-realization (the law confirms the essence of the phenomenon: “Everyone gets one’s own, according to one’s life in a society – either music or technics”).*
 - 11) *PS’s programs are individual and unique (like fingerprints).*
 - 12) *The third, and final, step of an HRR on the way of molding within one’s own self a perfect (enlightened) Spiritual personality is the modulation of our PS by the Holy Spirit and the acquisition of the spiritual soul Spirit (SSS), which has got its Spiritual Home beyond the Solar System. (The law confirms the lawfulness of using pyramids by Atlantes for the SSS’s ascent homeward, the Galaxy Milky Way).*

Resume: *The living substance of the Earth and cosmic ether on the field level in the form of lepton fields, produced by Venus-Earth planetary torsion interaction, makes up a quantum emitter of the corporal soul Spirit, equally as of any other earth creature, in accord with the program of the Earth biosphere evolution.*

The formation of the Spiritual ‘ego’ (from the animal soul Spirit to the personality Spirit) occurs under the influence of the torsion field, produced by Uranus-Pluto planetary interaction.

The timely cognition of one’s own self in the Spirit and of one’s own predetermined mission in a social medium is a guarantee for the fast fulfillment of a specified earth program, delightful living (however hard for the corporal shell and its manager (the Spirit) it could be) and return to one’s Spiritual Home place. The corporal soul Spirit’s capacities, unclaimed by

our Spiritual “ego”, become atrophic (disappear); along with the destruction of the corporal shell, its quantum emitter (CSS) gets absorbed in the terrestrial energoinformation field, and our genuine Spiritual “ego”, having gone through noospheric rehabilitation, appears, a certain time afterwards, reincarnated in a new corporal shell.

The elements of spiritual cybernetics are also absolute psychoanalysis, absolute spiritual “ego”, absolute law of macrobiosis, absolute principle of complementarity, absolute healing, absolute holograms of spirits – of a perfect Homo, a Homo sapiens and a Homo roboticus.

Even under the impact of the parental environment, of the societal education and breeding, the exposure of a future man-the-Spirit to the external action of the Earth ether’s disincarnated Spirits is so essential, that it may not be neglected in any circumstances.

Demons, as well as orthodox and other type atheists, are identical in their designs to make judgments and prohibitions, regardless of being found on different levels of their manifestation (a demon carries in itself the design of a self-murderer, a murderer of the otherwise-minded, and implements its design when being housed in the corporal shell of an “earth creature”). They are spiritually underdeveloped human beings (spiritual daltonians), incapable of understanding in their hearts the laws of development of energoinformation substances of the physical and metaphysical world manifested and non-manifested.

To identify a spiritual daltonian is easy: his mentality is formed with the left hemisphere brain convolutions, the right hemisphere being atrophic, which causes the destruction of the trans-communication, innervation links with the spinal cord and desactivation of the channel for perceiving the Holy Spirit, i.e. the desactivation of a receiving cosmic antenna (the spinal cord). Simultaneously, the impact of the cerebrum on the abdominal brain is blocked, which results in all exchange processes on the cellular level being conceded to individual organs. The “earth creature’s” system of vital activity becomes decentralized and is prepared for self-destruction.

Each man-the-Spirit is given a chance, within the boundaries of 4 epochs (Taurus’, Aries’, Pisces’, Aquarius’), to appear on Earth 14-15 times in the average, with an epoch being 2130 years long (2130×4): $14 = 600$ years (each 600 years approx.).

The task of a man-the-Spirit, over his each life in a subsequent apparition on Earth, lies in the acquisition and proper use of the chances given to him by the destiny for the sake of developing his personality Spirit (see ‘Absolute laws of spiritual self-development’) within a given life, and in getting prepared for another life, till he reaches the state of his personality Spirit’s complete merge with the Holy Spirit, followed by the return to his Spiritual Home in the spiritual soul Spirit (the Milky Way being the center of the elliptical Galaxy).

The Biocrystallization of beings –the Way to the Harmony

The man’s main goal is to identify himself with the Universe, i.e. to understand the interrelationship of the micro- and macro-world and to try to create this image in his personal thinking.

This offers a big opportunity for mutual connection of two for us important structures. Everybody should bring his body to the state of “brightness”. It is possible, at first by continual learning the biochemistry – the factors of revealed energetic exchange and

improvement of its quality. This process goes through not only one life. The basic criterion of the metabolism is water fulfilling the function of regulators of all inside man's systems. Secondly, realization and accepting the scheme of the composition of the world and composition of the worlds and seeking for opening laws for the space and time and for deeper understanding of their cohesion.

Thirdly, the principle of a life appears to be researching of cleansing methods of the organism for maximal understanding of outside and inside space and of their synchronization.

Our life is short but it is known that on every step through reincarnation we deepen knowledge for the development of our individuality based on the expansion of the collective consciousness.

Today the cleanness of a being – that is the measure of accumulation of knowledge of past lives. The creative effort put in every work for opening the ideas of human existence gives the possibility to enjoy the meeting of important “stars” of the first range at the conferences for the exchange, accept and correction of thinker actions of the collected collective. Furthermore, this work creates always an active pulsator and this raises hopes to speak about a possibility of rescue of the mankind.

The Transformation – Light Is Coming

Transformation is the part of the evolution. Fear, anxiety, chaos, hunger and despair are not the building stones to the Creator's plan, but they are instruments of the violence and forcible operations.

Transformation is the comeback to the “True”. The true is everlasting. The true is justice. All other values are concluded in it and come from it.

Love is another feature inborn in human beings. It should be showed and shared by everybody. Where love is, hate cannot be there as well. Love changes itself towards the non-force. An individual who is flooded with love cannot indulge in any kind of force. Where no love is, people vulnerate each other.

The justice results from the true. If these features are together, it results into peace. And peace is expressed as a calm and quiet behaviour.

We are part of the universe of free will where everything is allowed. But the Creator is everything, the darkness and light, and just the light is coming back to the Earth. Light is information – frequence – wave of feeling – vibration. Vibrations are continual and bring and transfer forms of intelligence. The frequence of light brings the vibration as well and with help of it we will be able to open information stored insides of us. The frequence of love brings creation and respect to all created and a connection to all created. But the frequence of love without frequence of light can become crippled if we thought that the frequence of love comes from something outside of us.

That we are living through is the living power of energies in fact. We allow them to express themselves through us. We allow as well the vibration of light to enter the planet via our bodies and mutual cooperation. We create the possibility and energy takes this opportunity. We are the mediators of the transformation. Our feeling is vibration in fact. If we have access to the frequeuneces, it will enable us to understand the information. If we cling on our own identity, then the logic mind does not allow us to recognize the states of

consciousness. *If we close ourselves into the border of ego, we are not willing to accept the existence of other fields and block the access to information, access to the light. It will not be easy to understand all identities collected in one.*

The big polarization of existing energies has happened. We are the participants of changes. We can think that big chaos and turmoil come up, when people and nations rise against each other, when everything comes apart..... We move to new energies. The Earth shivers to set free itself. We should not be afraid of periods of the adaptation and regrouping. We should join up with it.

There is no doubt that a galactic flood wave of light from future is approaching our planet to interrupt everything from its impassivity. The whole planet will experience one-sided enhancement of consciousness. No doubt, it will be gigantic to influence all masses trapped in the controlled frequency.

It is exciting to be on the Earth at present. The transformation brings mergence of identities, mergence of cultures, establishment of many new rules on the world, even if the chaos, upset and loss of many material certainty happen. Those, who prove to manage the change of frequency, will develop. We all should become the bearer of the Light!

The Capacity for Unique Bioinfluence Is Where the Colors of the Kirlian Aura Are

Prof. Marinon's opinion of the color Kirlian effect

"In the Kirlian effect, which is a high-frequency electric discharge in gas, the color of light depends only on gas. It does not depend on the electrodes. It is apparent that the color Kirlian aura carries biological information from the object itself. The observed phenomenon cannot be described and explained from the point of view of the modern physical notions for the color of the light of gas discharge. The fact that different colors are being observed, apparently confirms the opportunity for selective influence on the researched object. The methodic and the results of Dr. Ignat Ignatov are a novelty, because local energy states of the researched object are displayed depending on the colors in his electric aura. This, as a fact, presents new possibilities for the research and characterization of the qualities and properties in a biological and physical aspect of the object. New opportunities are found for the characterization of the biological properties of objects after a certain influence. Dr. Ignatov's methodic for Color Kirlian spectral analysis can be defined. New notions for color vision are possible to be discovered. It is not clear whether the green color that we see is an averaged effect between the yellow and the blue color, or in some cases it corresponds to a wave length corresponding to the green color of the spectrum (Marinov, Ignatov, 2008)"

Experiments were performed with color Kirlian photography, aiming to look for dependence between the colors of the electric aura and the bioinfluence capacities of a certain person. With regard to the realization of a precise analysis, a research was affected of the spectrum of 9 persons, claiming to possess bioabilities in energy 'give' and 'take' mode. The Kirlian effect, in its essence, is a selective high frequency discharge. An auto-electron emission is also observed.

The optic transitions depend on the energy of the separated photons. In the red color this energy is 1.82 electronvolts (eV). In the orange color – 2.05, yellow – 2.14, blue-green (cyan) – 2.43, blue – 2.64 and violet – 3.03 electronvolts. The basic

conclusion is that the more prevailing the yellow, orange, blue-green and violet colors, the stronger the expression of the bioinformation.

From over 2000 Kirlian auras, which are made only 4 persons, who are educated with Drossinakis' methodic© are achieved unique 100% discharge in the sphere of the thumb contact with the photo emulsion (Drossinakis, Strauss, Hirschle, Seidler)

TRANSITION TO THE AGE OF AQUARIUS – THE FINAL ACCORD

In 2004 according to the will of the cosmic civilizations of the solar system, they decided to move to another cosmic space to avoid the catastrophe in 2012 that has been discussed on the internet on a large scale. The catastrophe could happen like this.

It is known that a planet - called the planet X and known under the name Black Hole – visited the solar system once during the period of 36 thousand years. It could have destroyed all lives on the Earth. The next meeting with the uninvited guest should happen on the 12 December 2012.

The planned “transition” to the age of the Aquarius is connected with the change of civilizations on the planet Earth. This is confirmed by the mass birth of indigo children and in this context a few measures have been undertaken by the association:

- a. Moving the souls of the 5th Civilization – us wit you – on another planet to another constellation that is very similar with its nature to the Earth .*
- b. All institutes that have served the mankind for last 8 thousand years have moved there. These are Angels – Protectors and bank of the souls – the world that is called so.*
- c. The Angles Protectors were replaced by teachers of a high essence interested in our souls but they do not have such abilities as the Angles Protectors.*
- d. As the threat of prostration of the 6th Civilization was real, it was decided to dislocate the solar system to another cosmic space because it was not possible to dislocate the Earth separately.*

The solar system relocation was possible only by the way of rotation by a precise screwing into a new space. During this rotation that began in December 2004, the axis of the Earth was shifted naturally following by a big gyroscopic measured 8 degrees during 24 hours. The North Pole moved towards the Canada by 800 kilometer and at the same time the South Pole was forced to move towards the Indian Ocean which caused the well-known catastrophe Tsunami in the South-East Asia and almost 300000 human lives were lost.

While shifting the axis of the Earth the partial approximation of the parallel civilizations happened. There are 5 of them beginning with the civilization Zetov and they are our nearest neighbours in the parallel world.

An energetic attack on the whole mankind came from the planet Zetov looking like a connection to the Chakra Manipura connected with the attacking of liver, pancreas and gall bladder. Since then, the energetic shooting on the mankind has been continuing (for more than 4 years). At present the mankind is found in a critical situation because everybody is 8 times nearer to the death, independently on the age, nation and religion. This has lead to a big mortality increase, especially among young man. According to Russian data, the general mortality in May 2009 increased 20 times. You can see it when visiting any cemetery. Last

attack was on the 15 February 2009. Then the solar system rotation stopped but we are in such a space of another energetic fund that we have not been adapted to yet.

By this explanation I can believe that everything that happened does not have a character of someone's ill will and can be presented as a good thing. But they are not expected any catastrophes in the year 2012.

Unfortunately, the indigo children were subject to the attack as well. There will be a big purge – selecting of people in the year 2012. Another attack is not supposed because we are not accessible for parallel civilizations.

The coming new period will be the era of cosmic consciousness and the race of the 6th civilization will be the race of the world creators. There will be no wars and no force in this era. It is important for all people living on the Earth to change from the technocracy to the cosmic thinking. The new born children already have this thinking because they are the old souls with the non-global origin, but they come from the bank of souls – from the star Arktur, constellation Volopas.

The ongoing events are no tragedy because they do not destroy us but they move us. There will be the continuation of the Earth live wit the reincarnation, karma and Angels – Protector on the planet Earth No. 2.

I try to protect the most possible representatives of the 5th civilization because the new born civilization will not be able to adopt the whole scale of technology and context of the transfer.

After my correction lasting for 30 seconds, the state of people changes totally but the work with the soul is very important to get the granting of the entering into the new era.

The Meta-psychology – Science and the Social-cultural Phenomenon /resume/

Recently, the meta-psychology has become modern.

- 1. Lots of people use the meta-psychology terminology (cryptaesthesia, telepathy, leaving the body, bio-energy, the information field, etc.) Different people use different meanings.*
- 2. The terminology of meta-psychology has an international character for example on the internet. People using this terminology are characterized with the specific level of education and social status. A habitable language and jargon has been formed, conferences and meetings are organized where the experience is shared.*
- 3. The meta-psychology could become a “religion” or philosophy of life in the future. All terms and ideas used (bio-energy, ergo-information exchange, sole information field, etc.) could clear all effects including the social ones*

An ideological vacuum grew up in connection with the crisis of the communistic ideals. People have to believe in something and the religion dogma has being replaced by the dogmatic psy-phenomenon related from the field of scientific analysis and critics. See the following components:

- 1. Mutual interconnection and existence of life and lifeless nature,*
- 2. Mutual interconnection and existence of everything that is life,*
- 3. Image of the general ergo-information field of the Earth (and the whole Universe),*
- 4. Possibilities of the individuals to take effect on the world processes of the affairs coming around them.*

5. *Inevitability of the development and self- improvement.*

Only those people have success that are able to control the information and are able to dispose of it. The temporary man needs scientific grounds. Performer in the field of the meta-psychology seeks for the certainty or makes a new philosophy or view. The aim of the scientific meta-psychology is to secure the "rational grains" existing in the meta-psychology.

INFORMATIONAL SYSTEMS OF WATER AND PHYSICAL SPACE AS A BASE OF BIOENERGYTHERAPY

Now we know only two basic objective existing informational systems which have determined the appearance and existence of life on the Earth. There are water medium as the base of any physiological and intellectual processes and physical vacuum as a medium of existence of all particles from which all objects consist of.

The influence of these both systems allows to confirm that the informational changes in electromagnetic vacuum are connected directly with the informational changes of water medium in living organisms.

That is why the information transfer between systems and its registration depend on the peculiarities of these systems. It is possible to say that the objective existing informational system has made a choice among earth systems the more related next objective existing informational system which was water medium.

The consideration of the informational interaction of these both systems is the base of the informational system of life.

The mechanism of the interaction of water medium with electromagnetic vacuum has been opened when the universal energyinformational analyser was used. Before it the full imagination about the water structure state has been discussed. Only in that case it is possible to understand what the world informational field is and how we can realize a contact with it through the objective existing informational system of water and physical space.

It is also shown that the different bioenergy properties of the living systems and the action of the energyinformational apparatus can be described by this conception.

School on the planet Earth (12 classes x 600 years)

Investigation of the cycles in the Reality forced us to deal with the works of A.Czizevsky, V. Chlebnikov „The folder of the destiny" N. D. Morozov „Rhythm of history". So carry out the systematic analysis of the past and projection to the future. Author executed careful inquiry and its implementation made me possible to put together something like tables, which decays cycles as Outer (Cosmos, Solar system, Sun and planets), Planetary (Stationar matter, live material and substance of polus) and Society – that all together presents more than 240 cycles.

Edouard Churet in his work „Initiated biggies" used the instance of appearing of big teachers in our world, who brought teaching (Rama, Krisna, Hermes, Moses, Orfeus, Pythagoras, Platon, Jesus). He found out that Great teachings are coming to our world every 600 years (614-622 years), which by the jump take up the consciousness of people for the new, higher and more difficult level.

Just to this investigation is initiated the whole work – „Incidence from out to cognition of mankind". Mankind – the definite number is linked by common aim, interests and simply residing in surroundings.

Dividing of man out of environment of animals:

- Animals are adapting to environment

- Man-animal

- Man changes environment to its profit

Man turns environment, where lives, by two ways:

Direct incidence – digs the ditch, build the house and so on.

Indirect incidence – create affairs, which on the universal levels of knowledge of individuals are imperceptible (hurricane, default, mood of women etc ..)

If succeed to the single man, to genus, brood or to nation find out the new, more effective way of change of environment to its benefit, obtain the benefit that they stay alive.

Already earlier has been told sentence about technology, thanks to that man can adopt unknown:

CHAOS (Unknown) -- Irrational knowledges

Rational knowledges -- Technology -- Task for society.

Every time at new description of the world are working out the new and more effective methods, how to change the surrounding environment on behalf of human being. Hereat is coming to gradual transmission of Irrational knowledges to the area of Rational education, what allows to elaborate the concrete technologies for obtaining of product on the behoof of company (Association of people).

Every 600 years is under way of some Incidence, that have at the end manifestate in the company as some new principial changes in knowledge, thereby and himself organization life of companies. How was running this change in society to the introduction of Thought of the year 1200; because of lack of documents we cannot about this entertain, but realization of Thought in the 1200 year is well documented and thats why we can disclose the universal patterns of introduction and assumption of the new thoughts in the company.

Idea of the year 0 – teaching of Christ about reconciliations of all brothers in the Christ (dissolution of incarnation and exit to God through the Christ).

Idea of the year 600 – teaching of Mohamed about Allah (activity and equality of all Mussulman in front of the Allah. Direct contact with the Allah).

Idea of the year 1200 – Victory of Western idea above the idea of the East. (Discovery of the planet Earth for an industrial utilization).

Idea of the year 1800 – „Freedom, Coequality, Fraternity" (the Period „Freedom" finalized in 60 s of 20. century by extinction of the last colonies, the period „Equality" startup in 70 s of 20. century by the idea „ The rights of the human being", today goes preparing to creation of the World's government, that is perhaps only in case of equal rights for all inhabitants of the Earth).

Idea of the year 2400 – first obtaining of solar system.

Ideas of year the 1200 first in the Irrational knowledge, where the authors tried to display their feelings by action of ideas of the year 1200 like „magic" tractates, when they replaced the nonexistent conceptions in language of various pictographs, then decryption of that Irrational cognition in the Rational knowledge thanks to the whole series of investigators and scientists, next investigation and screening, attachment to the real. On the basis of the gained Rational thinking the concrete technologies are elaborating for creating the Work that is

needed for the society. And just that technology facilitated to speed up the Europe its development and obtain benefits at getting space on the Earth.

As well as similiary in the 12. century and in 18. century magi and wizards reappeared, who tried to interpret the flashing lights of knowledge in their magical" services, which caught and could develop their consciousness.

And without delay the people are appearing, who convert the work of magi and wizards to the particular technologies which immediately get to the hands of realizators.

These realizators really proved, how powerful instrument is in the hands of man, and that its incorrect utilization can evoke the disaster to the society, but at the correct this instrument can solve many problems in the society.

In the society chaos get started – on the one hand there are Rational knowledge and Technologies, based on the implementation of Ideas y. 1200, on the other side the magi and wizards, healers and sensibils, charakters of different Teachers and Mahathmas, devotee have emerged in the society who introduce and promote dark and confused ideas and technologies, based on some induced ideas of the y. 1800.

Problems of current science began, when the coffer, choicely filled by Great magi and wizards Irrational knowledge according to the ideas of y. 1200, showed its bottom. To the big surprise the current scientists and research worker, who built their path on the criticism of „strayed" Great people, who understood, that they can't investigate Nature and Chaos separately, because technology and investigation of Nature, Unknown and Chaos essentially distinguish from the research already „combed" irrational knowledge.

Now we are before the phenomenon, which is for many incomprehensible. Well-deserved agents of science, weighted by many honours and decorations are starting to actively interest about the parapsychology, astrology, kabbala, sensibility – totally recent affected and mocked. Simply, that they are on the top of currect studies and because they are real professionals in their field – they feel that they are going to be witnesses of processes and phenomenons that are not as real as it accepts the official science. That is why for their hazard they are looking secretly and with bashfulness into knowledge, which are officially forbidden.

It was given us 200 years for the creation of unified law to the whole planet. There is no possible to create the world's government and without world's government it is not possible to solve the problem of security of the planet Earth from the danger from the cosmos and at the peace solve the question of transmigration of nations, before the level of ocean will lift during the creasing of temperature. After resolution of the question „Equality" the phase of „Brotherhood" enters up when the mankind must join to the only one family, before get out to the Cosmos. This period will last to the year 2200 to the y. 2400.

Having analyzed the generally known facts, it is possible to make the following conclusions:

- There is a high organized society that is much higher than we are according to the development of consciousness. (A community of adults concerned with some problems that we are not able to understand and a society of children interested in learning and playing).

- This society has a school where the growing generation gets prepared in compliance with the interests of this society. The school is represented by the whole Earth where the souls of men go through the entire education. The teachers of these men are women who are divided into:

1. teachers at nurseries, kindergartens and first year of the primary schools

2. teachers at school at various school year-class

3. teachers at universities

4. teachers for preparation of the leaders beginning at the village counselor to the manager of the planet.

- There are 12 classes at school (12 signs of the zodiac), one school year lasts for 600 years and at the end of this period pupils make an exam and go on to the next level, to other class. People not succeeding in the exams fail. Hopeless lazy-fellows are displaced from the school and fall out from the education system.

- The school year begins when the given block of information is introduced. The class should master this during one year. The education system is very hard but effective. "Nature is not cruel but pitiless". All ways of influencing the pupils are used, beginning at temptation to compulsion (you have to take into account that death is not a serious reason for absence from the school.)

- The entire course lasts $600 \times 12 = 7200$ years. Generally, the education of temporary man has lasted for approximately 5000 years, it means $5000 / 600 = 8,3$ class-years (it means he is 15,5 years old).

- Each exam represents Armagedon for pupils, nevertheless, till we do not finish the school, no Armagedon (End of the Light) will happen. And the final exam will not happen earlier than in the year 4200 A.D.

- The school on the Earth already is a secondary school. Then is the possibility of visiting the university before we will have the right to work in the world of adults independently.

So we can suppose that everything noted above can be written schematically to show the continuity with the present as well:

1. Year 0 – Christ's teaching

2. Year 600 – Mohammed's teaching

3. Year 1200 – use of the planet for the economy

4. Year 1800 – destruction of old feudal forms of ruling in the society and creating a new paradigm: "Freedom, Equality, Brotherhood".

- The period of "Freedom" – from 1800 to 2000 – destruction of the colonial systems and all kinds of slavery on the planet Earth.

- The period "Equality" – from 2000 to 2200 – disappearance of all kinds of inequality or discrimination of any inhabitants of the planet Earth is supposed

- Making of a uniform law that is possible only at legislative gathering of the whole planet Earth,

- and this is possible only under the condition that all national governments admit the advantage of a social, financial, legal and economical union and of international work distribution.

Summarized, it is possible to say that by understanding or not understanding we create paradigm that had been set for us. Further as in the army – "if you cannot, we will teach you, if you don't want, we will force you". We have to create a law society on the planet Earth by 200 years.

The period of "Brotherhood" – from 2200 to 2400 – creating of a unified family from all nations of the planet.

The year 2400 is the year of passing the exam and of a new setting for the next 600 years – at first the gaining of the solar system is important.

When continuing we will find out that we have a complicated task that can be divided into three simpler tasks:

- threat from the cosmos – a threat of a comet or an asteroid;

- warming of the globe climate – increase of the world ocean level;

- realization of the paradigm "Freedom, Equality, Brotherhood" – of the period "Brotherhood".

To solve the given tasks it is important to create a world government that will work based on a uniform law accepted by the Parliament of the Earth.

1. World government – based on the concentration of technologies, brains, energies and sources – it is possible to face out the threat of the Cosmo.

2. *If the world government keeps all sources of the planet at disposal, it will find an alternate how to move nations from sinking territories to free territories.*
3. *The world Parliament will be composed of all governments of the Earth and will hand over the sources and a part of its own competences to the World Government.*
4. *To create the members of the World Parliament it is necessary to balance the social, political and world-view level of knowledge of all members of the Parliament.*

Conclusion:

There is a final function – the transformation of the consciousness of the society on the planet Earth with the aim of creating a law equality of all people according to the planetary law.

There is a pressure on the social structures of the human society made by the planet itself (threat from the Cosmos and global warming).

There are women who fulfill the task of teachers for men and with their help this problem will be solved.

Doctor-Homeopathic
Czech Republic, Praga*

Dysillumination

The World is a world of consciousness and forms, without any borders. Man as a organic entity is projected through its consciousness into its physical form in a way, that it can sense this world in its boundlessness and expand the force of creativity, incumbent on superlative acceleration of love, freedom and bliss in each of us. In this role men is however failing!

The reason for failure is older then humankind itself, and that is why the human race began, it will through Earth engage the creation force of harmony with direct knowledge of the world. Its radiance was however completely stolen and in the current condition the flame of human consciousness is only smoldering, without the ability to ensure to the energetic and biological body its integrity in the form of physical perfection and immortality

Any enlightenment in this condition of human existence is a mere forced fabrication, because people, once guided sensed and guided by the spirit directly, are now after losing it swallowed by a mind implant, which is in date psycho-energetically and bio-energetically implemented in their energy field in a way, that the heterogeneity of this substance which is destroying their body and mind is not even sensed.

Multi-dimensional and for humans fully toxic mind is this way controlling and manipulating a three-dimensional human body without any control, either in disconnection as a „natural“ or with connection as „artificial“ intelligence. The human conscience in this condition is a mere fragment of humankind, and the height of its potential is dividing the humankind to humans, to humanoids with more or less advanced degeneration, which is making up the majority in human population and is the real essence of worldwide Racism.

In this disproportion, energetic, psychic and biological implant of the mind is excluding the lost Spirit and only a small number of humanoids with the rest of the people is searching for the enlightenment in His direct return. In this, they are however wrestling with supreme manipulation of the mind itself and in error choose the way of dysillumination – the worldwide scientific opinion or the God codex of the world in its many profane or sacral planetary and universal variations, leading back to the spiritual damnation. The spiral, in which humankind became trapped, is turning against our will and humans do not have the power to leave the System.

The implanted mind, fed by the light stolen from the human illumination, is compromisingly irreversible, however fixed Light, through which controls all aspects of

human sensation, replacing dimmed reflections for clarity and reality. The solely abstract core of the Spirit, without any definition or other energy form other than the collective mind of universal, cosmical blessed Masters, can be in the form of spherical matrix of the heart and can enter the trail of knowledge and lead the individual to the primary Force of creativity, of which the only secondary part is left for them.

The universal law of the living trinity, given as a gift of the Masters in the course of exhausting, dedicated work of warriors of light in the Czech Republic, is the tool of Spirit, which thought out the spherical matrix „of Master taken to the earth“ is leading out of the System of hatred, submission, poverty and suffering. Thought out the electron body in the four chamber light shell of consciousness, created from the returned illumination with the help of the Great Masters, is man capable of returning to the original role of wise and hospital caretaker of the planet in the hostile and predatory universe.

Thought out the teaching of the Spirit and its seven laws is man then capable of objectively and pragmatically illuminate the collaborating humanoid organization of Earth, completely exterminate the hierarchy of reptilioid-divinoid degenerates of earth, of the surroundings, and predators from its twin, if they endanger the Light of mother Earth and its pure conscience in the form of a beautiful human race and its born, and yet unborn children. In their interest I stand here till the end of time!

BODY, SOUL, SPIRIT AND NEURO-COMPUTER (RESUME)

Sometimes it is very complicated to measure the relation of the body, soul and spirit regarding the bio-energetic, sensibility, healing, when the consciousness draws apart from the natural scientific solution of the problem.

The relation between the body, soul and spirit in term of experience with the neuro-computer is used for modeling of the action of the human brain and his psyche. The complex of the neurons and nervous connections represent the “body” of the computer and of the brain. The potential possibilities are appointed by the structure of the connections that are inborn and encoded in the genes. The impulses come through the nervous nets of the brain. The complex of all signals in the net can be called the “soul” of the neuro-computer.

Regarding the brain, in the coma state the suppress of the brain functions happens. The awaking from the coma leads to the stepwise restitution. The vegetative status ensures the life functions. The working brain expresses itself as an electro-magnetic, acoustic and other radiation. The processes in the nervous nets of the brain or in the neuro-computer can be named as their “spirit”. The realization of the psy-phenomenon is inherently connected with the function of the brain, for example at plants, cell structure, life organs, tissue, etc, on all levels then as the bio-chemic, molecular, cellular functions of the brain.

Health-saving and health-correcting system of education

This is a principally different system of KNOW-HOW and special high technologies of education, maximum approached to psychological and physiological possibilities and peculiarities of educated persons. The system presents a brilliant example of the scientific organization of work: it removes complexes and fears of education process; revives optimism and feeling of confidence in abilities; gives exact and profound knowledge of the subject without written home exercises and cramming; trains in algorithm of mastering of any subjects, verses and prose "by heart", to ability of work independently and creatively; it fixes the process of education with positive emotions of creativity.

A peculiarity of the system is mastering of a complete course of Russian language to the level of the entrant + 500 themes over the school and high school programs in 900 times faster of existing in the world educational techniques.

Use of algorithm of mastering, application and fixation of information, faultless writing, answers at the board, writing of dictations, learning of verses "by heart" and any subjects: mathematicians, physics, chemistry, geography, foreign languages, establishment of graphics or correction of handwriting faults etc. occupies only 5 - 15 days, irrespective of the fact if the child is a "right-handed person" or a "left-handed person".

Citizens of other countries master Russian language without written home exercises maximum in 3 months (90 days) to the level nonaccent pronunciation and correct written speech.

Even with children of the category «children in trouble», having problems with memory, attention, space-time orientation, often heavy pathology within short time, completely disappear bronchial asthma, enuresis, liver cystosis, pielonephritis, episyndrome, aggression, disgraphia, dislexia, desorphography, general underdevelopment of speech, neurosis-similar syndrome, asthenia headaches, gastritises, insomnia, etc. without application of medicines, computer, TV, 25th shot, neurolinguoprogramming, encodings, hypnosis etc.

Laser puncture of children suffering by night enuresis

Night enuresis is incontinence of urine during sleep. Primary night enuresis (failure to supervise the functions of the bladder in bed) affects 30% of children aged 4 years, 10% aged 6 years, 3% aged 12 years and 1% aged 18 years. It occurs more in boys, often family driven and is associated with sleep disorders. Enuresis in some patients represents only a delayed maturation process of urination, which is decided by time and the growth of the child. In some cases, manifests as a symptom of spinal injury, worms invasion, urinary tract infections, childhood diabetes and others. In most cases, however, the case of idiopathic (of uncertain cause) a breach of the processes of excitation and retention in brain cortex subcortex and hence somatic and vegetative inervation of bladder and his automatic reactions.

Wet night (night enuresis) is affection, known since ancient times. However, the disease

is a medical problem unresolved to this day, which severely traumatize children suffering from disease, and not a few patients in adolescents and in adults.

In everyday practice, those suffering from this disease treated by many specialists - pediatrics, neurologists, physiotherapist, psychiatrists not achieve definitive results from drug therapy.

In accordance with the rules of traditional Chinese medicine night enuresis is considered as a "deficiency of chi-energy in the kidneys and the weakness of bladder control function. This exhibition is to show positive results from the laser puncture to treat children suffering from night enuresis. This method is easily applicable in children, because it eliminates the fear of pricking, vegetative effects accompanying some acupuncture procedures and gives reliable results. Are treated 10 children between 5 and 10 years with idiopathic night enuresis (in which have not and somatic disease and congenital malformations of urinal tracts, causing a co-symptom enuresis). Of these patients, 8 were boys and 2 girls. In most of them night enuresis occurs almost every night, and applicable drug therapy have partial effect. Treatment was with helium-neon laser with a wavelength of 632,8 nm radiate in the visible spectrum in a continuous mode by combined application acupuncture points of the body chanel and ear points. Were conducted 10 sessions of each child (3 times a week), having met the necessary safety equipment required for working with laser radiation.

Treatment was implemented in less than 3 symmetrical body points and 1-2 points on the ear, are treated as first body points, then ear points (with a duration of up to 15 seconds in body points, 5 seconds in ear points) and total duration sessions of 2-3 minutes. During treatment patients did not drink much of fluid in the late afternoon and evening hours.

Treatment has been applied puncture in following chanel points:

- Bladder chanel -V62 shan-may, V57 chan-shan, V28 pan -guano- shu., V23 shan-shu, V 67chzha-in

- Kidney chanel (restorative method): (restorative chanel point) R 7 fu-lyu, R 3 tai-si

- Forward middle chanel: J3 chzhun-tszu (alarm point of the bladder chanel), J4 guan-yuan, J6-ci-high (restorative method)

-Backward middle chanel: T4 min-man

-General points: E36 tszu-san-li, V20 fan-cha, V10-tien chzhu, T20 bay -huey, RP 6 san-in-tszyao

-Ear points - kidney point, bladder point, sympaticus point, marrow point, subcortex point and others.

In 3 children was applied a second course of laser puncture 2 months after the first course, as the effects of initial treatment was insufficient expressed.

The results of treatment are encouraging, but with incomplete solution to the problem. Notes are indicative dilution of enuresis (at 70 percent of treated children has problem 1-2 times a week, having mean that until now applied drug therapy was not led to similar effect. In the follow-up after 3 months it is found that in 3 of the children resumed more frequent enuresis, but up to 3 times a week and they are given a second course laser therapy with the above parameters. In 2 of the treated children in the 3 months period of monitoring were found only occasional night releases that the background of the previous frequency of the problem followed by relatives as a significant result. Into account also is improvement of psycho-emotional state of most children showing symptoms of a general atonic and asthenic reactions of Central nervous system and Vegetative nervous system.

Described results are reported only short (3 month) follow-up period, which may not lead to definitive conclusions about the effects of laser puncture for complete cure of the disease so difficult as enuresis. Healing mechanisms of action is probably due to improvement of common processes in the body of patients, regulation of the energy imbalance of the affected chanel and associated organs and systems by effect on acupuncture points,

the influence of harmony between Yin and Yang energy of the authorities concerned and the body as a whole. In literature in detail are described biophysical biochemical effects of laser therapy – improvement of energy processes and microcirculation of the tissues, increasing cell metabolism and others. Laser puncture probably combines effects of laser radiation with a direct impact on biologically active points, leading to influence energy balance and restore energy flow in the body. Property of all living organisms is to acquire and cumulated and exchange different types of radiant energy including laser.

The advantages of this method to conclude in indolence, safety, ease of application, a minimum time of impact, lack of side effects and complications of traditional acupuncture, which makes it especially applicable in children. The lack of definitive results for a complete cure should not lead to denigration of laser therapy as a healing factor, as Holistic approach teaches us to see disease as a process rather than a problem that has just found beginning and end. Improvement of mental and emotional symptoms in most children suffering from disease is also an important factor for healing them as a whole, excluding the purely physical suffering and inconveniences arising from it.

AUTOREGRESSION AS A PART INTEGRATIVE MEDICINE AND AN ALTERNATIVE TO PSYCHOANALYSIS

Now it is well-known that most part of human illnesses have a psychosomatic origin. The term "psychosomatics" was proposed in 1918 by K.Heinroth.

Psychosomatics is the system of knowledge about the interrelation between the state of health and the mental state including conscious and subconscious sphere of mind.

As the psychosomatics factors rule the formation of most illnesses, several decades were spend to find ways for their correction. Well known and prevalent approach to this problem is psychoanalysis. In the context to this method one need to perform careful study of the situations in the past which have given rise to definite subconscious complexes. This method proved to be effective and have spread over the Europe and America. The real use of the method requires conduction of numerous prolonged consultations of skilled psychoanalyst.

Fortunately an alternative technics was created. This is the method of autoregression. It consists usefully of two steps. At first, one need to set the autoesthesia of the patient. This means that the patient needs to achieve the sensible perception of the problematical parts and places in the body, and visualization of the situational cause. Then one must gain relaxation of tensions in the corresponding places of the body either through the contact or noncontact restitution of energy flows in the body. Afterwards the autoregression itself is carried out– the visual trip to the past. Including last and previous lifes.

After you reach the identification of the past situations through the visual images, the next important step is to get awareness about the essence of the problem been risen by the situation, for example, wound feelings, past aggressions, condemnations, claims to other persons, disagreements, suppressed emotions, unjustified hopes etc.

Realization, understanding and releasing of these problems makes it possible to avoid the progression of psychosomatic illness and restore the health. No get pronounced and stable normally it is recommended to pass through several séances, but in some cases even a single procedure gives pronounced positive result.

This technics has an essential merit, it doesn't require the use of hypnosis, the patient is active and aware at all the steps of the procedure. One can treat this approach as safe and humane.

Several years (18 years) of use the method with hundreds of patients have been bearing different illness improved the efficacy of the approach and many merits in comparison with classical psychoanalysis.

A full-fledged, third-millennium life of health and joy

Today's millennium calls us to creative activity in order to accomplish our mission in life and become full-fledged beings. We don't focus exclusively on just one distinct direction; instead, we offer seekers the broad compass of a holistic approach. This new project offers interested parties not only enlightenment, but above all active collective creation.

As the wealth of a country depends on the health of its population, our association has set the goal of awakening an awareness of disease prevention with the understanding that "health is not only the non-existence of illness, but a state of ideal physical, spiritual and social well-being."

Due to the disinterest of contemporary society, which is highly indifferent in this hectic period to the needs of individuals, we also focus on children and seniors. We are developing two new projects: 50+, which aims at providing help to older women, and PERAMOST, which offers relaxation and motivational prevention of burnout syndrome. These are groups that are not well-equipped to handle the pressure of a society that does not favour individuality. The pressure of competition and the level of success lead to false expectations, followed by disappointment, passivity, or even aggression. But how can we measure ourselves when each of us is a unique being?

The foundation of our activities is a holistic understanding of the meaning of life and hence the discovery of humility and respect to one's own soul and the whole of cosmic activity. Thanks to searching and the realization by individuals that we are an indivisible whole and that care of all parts of the human organism is essential, a need arose to establish the Centres of Natural Preventive Care in various parts of the entire country. These centres are run by consultants and therapists of a holistic approach that offers non-traditional methods with the use of the latest knowledge of complementary medicine focusing on the client's individuality. I myself work in the Prague centre as an advisor of lifestyle and a return to a full-valued life.

The Harmony Regeneration Centre is also a partner in projects that bring the light and flow of knowledge for the birth of a new age. We want to help in the creative act of changing the face of the Earth to enable us to become a brotherhood of complete humanity, while preserving the freedom of each individual, and in this way set out on the path toward new BEING.

FUNCTIONAL POSSIBILITIES OF THE BIOLOGICAL RHYTHMS DIGITAL ANALYZER «OMEGA»

Among modern means of functional diagnostics adopted by the Health Care Ministry of Russian Federation systems of the integrated patient's state express estimation are widely spreading. In development of such systems the advances of physiology, biophysics and clinical medicine are used.

The biological rhythms digital analyzer «OMEGA-M» is devoted to analyze variability of human heart rhythms signals. Different components are extracted from electric cardio signal in wide frequency range. Analysis is based on neurodynamical models of electric signals formation and information technology of analysis of biorhythm called "fractal neurodynamics". These signals are generated by different components of neuron systems. The information technology allows estimating the state of vegetative tone, adaptation resources, energetic balance and state and the state of central nervous system [1, 2]. The conceptions of informational interconnections of cellular associations and between particular organs and their systems are the theoretical basis of the technology. This interconnection is provided not only by hormone regulating and immune system but also by electromagnetic "crosstalk" of tissues and organs of the body.

Features of «OMEGA-M» System

The diagnostic complex «OMEGA-M» enables to estimate the functional state of regulating and adaptation systems and psycho-emotional state of the whole organism as well. It is done by analysis of cardio rhythmical parameters. The patient's examination process takes about 5 minutes. The cardio plot of cardiac intervals shows the dependence of intersystolic (RR-) interval duration on the current circle number. It may be processed in two modes: 300 or 100 measurements. To get the necessary information from registration of cardiac cycles one must use the combination of electrodes from 12 appropriate standard areas of the body. Brain rhythms are separated from the electric cardio signal. In this case the registration of encephalogram is not required.

Single («static») investigation fixes the particular time profile of patient's state. The dynamic observation mode is used for comparative studies of patient's functional state (two or more measurements) and for monitoring of patient's functional state in real time as well.

The electric cardiac signal recoding is made by the remote control module. In this device the USB-interface with optical decoupling is used for ECG transmitting. Software of the complex is adapted for Windows XP and possesses a lot of possibilities of modern operation systems. In the development of this software the experience of different users from many institutions of Russia and abroad was taken into account.

The independent power supply allows to carry out examination of a patient in the field conditions.

Systems analysis modes

- 1. Variation analysis of cardiac rhythms – evaluation of vegetative regulation data by means of statistical, temporal and spectral analysis of cardiac rhythms.*
- 2. Neurodynamic analysis of biological rhythms of the body – evaluation of the level of central regulation and endocrine system state.*
- 3. Brain biorhythms mapping – evaluation of patient's psycho-physical state by means of phase analysis and brain biorhythms mapping. The brain biorhythms spectral power is defined for δ -, θ -, α -, β -1- and β -2-rhythms.*

4. *Fractal analysis – evaluation of the degree of the body biorhythms harmonization also represents the information about the immune state.*

The patient's biological age also can be determined. This requires the formation of specific gerontological rhythm. The biological age is estimate by transposing of measured functional state.

System's possibilities

- *Screening and diagnostics of patient's health functional state.*
- *Monitoring of functional state data – «calendar and health hours».*
- *Formulate daily forecast of psychophysiological activity according to the mode of «biological clock».*
- *Estimation of cardiovascular system state and other regulations by means of the «golden section» for ECG temporal parameters.*
- *Estimation of self-regulation level in the bio-feedback mode.*
- *Automatic measurement of the PQRST parameters by means of manual adjustment.*
- *Formation of the complex medical report according to the computer analysis, producing the document and results printing.*
- *Individual medical chart of outpatient with the embedded database with 15000 diagnoses. When using digital photo camera this chart includes patient's photo.*
- *E-database of patients enabling to export, import and backup data.*
- *The directed breathing gymnastics program in the bio-feedback mode.*
- *Mass examinations system "CRAB" enabling to register the ECG of 7 patients simultaneously.*

The apparatus "ANGEL-Z" is designed for restoring and harmonization of the body biorhythms to meet the nature requirement of the brain rhythms variation. It uses low-frequency electric pulses of small intensity current. The effect occurs in the frequency ranges corresponding to particular organs, tissues and cell structures of the body.

In combining with traditional and nontraditional therapeutic methods the program-apparatus complex "OMEGA-M" allows creating mini rooms with the completed cycle: "diagnoses – treatment – control – forecast".

Certification test of the complex «OMEGA-M» had been carried out while making the preventive examination of the professional contingent working under harmful conditions. The program-apparatus complex using showed its high diagnostic, forecasting and economic effectiveness. It was tested for preventive examination of healthy people groups and in hospitals as well.

Human ecology -- The energetic protection of man and the living environment

The problem of high morbidity and mortality of people has been the actual problem of the civilized world even in the present time with the fantastic level of world medicine. What has changed on the whole planet for the last twenty years so substantially that made the human organism so weak? Every healthy thinking man has to ask this question.

One of the main reasons identified by the scientists is the ecology, the technogenic and geo-pathogenic burden that influences every man of the planet Earth and has a harmful effect on his health.

Contemporary science confirms it: man does not end by his physical body but on the contrary, begins. Our body is closed in a protective cocoon of the bio-field, its picture can be

seen by the contemporary diagnostics, e.g. by the method of the gas-discharged visualization (the GRV method). Our bio-field is composed of many thin structural fields that ensure the information exchange and the energy exchange with the environment, they regulate all the processes of the organism and protect our physical body.

And just the protective bio-field gets all energetic shocks from the environment as the first. Rising “problems” of the bio-field go over to the physical body stepwise. And man becomes ill. Now a new illness has appeared – the syndrome of the chronic tiredness, when the ill organism differs from the healthy one by the decrease of the vitality, energy. Everyone tries to fill in his life-giving energy by his way: vitamins or food-adds /BAD, by physical exercising or running, trips to the countryside or walking on the fresh air, by various curative systems or spiritual practices. But when returning to the everyday life, the tiredness comes back again. Why? It is important that all should know that the environment takes him always his vitality.

It is known that the geo-pathogenic zones (GPZ) are fractures and cavities in the earth crust, subterranean water stream and issue of metal, big subterranean engineering nets, etc. Dr. Ernest Hartman discovered a global grid network that covers the whole globe and intersects every flat in many places in the length of 2 to 2,5 meter. Radiation of these magnetic lines- above all doubled and crossed - burdens man two times more which is especially dangerous for the man health. Building walls, ceilings and roofs are no obstructions for the geo-pathogenic burden, the radiation pass freely.

The research outcomes of the geo-pathogenic zones in Switzerland, Belgium, France, Austria and in the Czech Republic showed that 50 to 80 % of the oncological diseases are connected with the fact, that the ill people stayed on places in the long term, where the geo-pathogenic radiation took effect. According to the statistic data, 2,5 million Russians die from cancer each year.

So called technical factors have negative influence on the man’s health as well. According to the newest outcomes of the Russian academics G.I. Šipov and A.E.Akimov in the area of the physical vacuum and rotary/torsional fields, it has been theoretically determined and practically proved, that despite the exceptionality of the most prestigious foreign producers, all the electronic equipment is the source of the left-handed fields that generates electromagnetic radiation (and we can do nothing about it – that’s the nature of the electric field!). The latest products take effect on the environment, they themselves are subdued, and in so doing, they take energy from the man’s bio-field. It means, they change his informative-energetic structure.

It was determined by the medical researches that the left-handed field influences the man’s health negatively. People feel tired all the time, their memory is getting worse, their arterial pressure and the heart working is disturbed. And that’s why we get tired so quickly and are ill so often because there is electric equipment that strongly “suck up” the energy from our bio-field.

It is known that except from the left-handed bio-fields that are dangerous for the health, there are right-handed fields that are according to the medical research advantageous- healthy. “They improve the flow of all kinds in the environment, they increase the membrane conductance, the probability of the rising of the “plates / plax atherosclerotica“ in blood decreases by the flow increase, the metabolism processes improve and the harmonious state of man (heomeostaz) improves.

It is possible to point out the left- and right-handed fields with the aid of the bio-locational method of Mejlicev (patent no. RF 2021749 „ The way of assessing the types of mutual action of man and a plant”). The author of this patent assessed three types of mutual action of man and a plant by tests: “taking” the energy when the contact with a plant lowers the man’s energetic, “completing” – the contact with a plant increases the man’s energetic and “neutral” – the energetic state does not change.

Based on the bio-locational method, we have worked up an express methodic. Man is able to assess quickly and easily what takes energy from him in the environment and what gives him energy on the contrary. We have determined that for man is the following dangerous:

- *Electronics, which our house and man himself are thick with, because he does not get away from his mobile phone, notebook or electronic book,*
- *boiled water and every cooked meal after its consumption we want to sleep,*
- *subjects used in the household: linoleum, wall-papers, clothing, some house flowers, etc.*

So the earth with the geo-pathogenic zones, air with the electro-magnetic smog, boiled water even as a meal component and many subjects in the households take effect on the man's bio-field as "taking", it means they reduce his energetic potential. And that means that they really worsen the people's health on the whole globe!

Regrettably, it is not possible to solve the gentle radiation of the harmful left-handed fields by the traditional methods – but it is possible to neutralize them.

With this aim, by the help of the nano-technology we have worked out the neutralizers of the negative radiation: (<http://triumf47.inmarket.biz>):

„AKTEL“ – protection for the mobile phone, PC, TV set,

„GEOZON“ – protection against the geo-pathogenic zones

„AKVATON“ – activator of the water for the transformation of the liquid food from the energetic "dead" into "live"

„ENERGIK“ – for the bio-field completion of man with the vitality.

Everybody, who has the bio-locational method at disposal, can be persuaded about the high efficiency of the protection easily.

And that's why everybody should:

- *have the bio-locational method at disposal,*
- *learn to assess what in his environment takes energy from his bio-field,*
- *choose the needed way of protection for himself and members of his family,*
- *make his house energetic healthy! Energy= health of everybody on the Earth.*

Man's work-internet – towards the successful health of the planet

We live in the time when the traditional, cultural and social identities of people have been becoming weak. Less people define their clear belonging – whether to the language, religion, social groups, culture or even to the gender. That is why the searching for new answers is connected with higher levels of the consciousness.

The human being is the intercept point of relations in the society, of action of the planets and whole universe. New task for people rise from this at the following changes: our mission is to counterbalance the happening on the higher hierarchical levels – depending on one's abilities, disposals of the karma, on the education and the development. People as a conscious part of the universe - the God's plan- present together the rate of engagement to this plan, of realizing it and cultivating it.

In the case of the contemporary man it is mainly a mass – with help of that we change the world. And we have effect on the mass mostly by working. In the time of the rising cosmic consciousness and the spirituality development, which only a minority of the world population

share, people cant stay uncaredful to the globe's health. I see the point of this health as a sufficiency of work for people – but a creative, various and edifying work. This is mainly important in the time of the emerging global- pandemic crisis. Man of today has to create i.a. more compassion and love, which are so much needed if the mankind has to find new ways how to share material-limited sources and solve new tasks.

Man has various possibilities during his realization through the work. And he experiences all sorts of motivations towards the work. It is possible to find the attitude that “working for free is immoral”. Let's say that if the work is motivated only by the economic indicators, in addition virtually deformed, then it is the appearance of the small radius of development that in the next sequence of things invokes the necessity of the repetition on the low karmic level – because everything repeats (parameter space- time).

That is why we accept work not only as an instrument at mass working. We try to comprehend work as a mean for the enrichment of the soul, the spirit. I also feel that according to the God's cosmic plan, the economic and technologic growth is not the priority. On the contrary, people should extend their outlook towards the holistic perception of the world, it is towards the concern about all God's creations. Unfortunately, our planet and the world economic systems have been in the more conflicting relation.

The primary establishment of such relations in the world is considered to be the right one for the health of the planet that will be constructed on the holistic and equal access showing harmonic relations to all, showing harmonic relations between the genders, nations, races and religions, and so on.

New interregional portals i-RU.CZ and iRUCZ.RU have been created. Information in the Czech and Russian language offering contacts for undertaking and business and cooperation are systemized there, offers and demands are worked up there. The internet platform of Czech-easter economic collaboration has been on the top positions of the visit rate since 2001. It draws attention of many professional working places and often of many significant persons - head workers of the institutions. By working up the information for some tens of thousands of visitors, the authors get the possibility of working up the specific information in the conditions of the crisis, and they believe that working on a conference can help the visitors to step up on a higher spirit level.

The mission of the portal i-RU.CZ has been developed out of the internet as well - via own specialized forums. In the years 2003 to 2007 a number of business work shops were organized that were supported by some of the top Czech banks and some Members of Parliament.

The following aims were set in the contemporary phase:

- 1. seeking for possibilities how to help the businessmen and students to understand big changes in the realia and the practices of our countries that may be far from the school conceptions,*
- 2. helping above all young specialist and businessmen to seek real common interests,*
- 3. helping to develop interregional relations on the various levels.*

The leadership of i-RU.CZ continues to cooperate with the Russian-language people and specialist of the Russian language educated in the Czech Republic for the common creative work in the Czech Republic and we consider addressing the Slovak in the future as well.

Within the festival “OKNA DO RUSKA (=WINDOWS TO RUSSIAN)” a new possibility is considered to be organized – the exchange student interships when the interested persons form the Russia and the Czech Republic could stay one, two or three months in the guest countries, at families supported by concrete firms. The administration of the i-RU.CZ asks the conference participants who can help to support these aims with their contacts, experience and influence by contacting them.

Support given by the PSY ACADEMY Ostrava with the head professor Alla Kulikova has occupied a special and positive position in the activities of i-RU.CZ in the last year.

It is good to say that the approach of i-RU.CZ has got broad support in the last time. The managerial staff of institutions in the Czech Republic start to appreciate this work, the Chamber for Trade and Industry for CIS Countries, the Czech Tourist Association, the Honorary Consulate of the Russian Federation in the Czech Republic, the Embassy of the RF in the Czech Republic, Czech-Russian society, the Association of the Russian graduates from the Russian and Soviet universities, and so on are cooperating. The work of the portal is highly appreciated by the professional departments of the universities in Olomouc and Ostrava.

The all world has entered the global economic crisis that forces all of us to reorder our powers. I personally think that the impact of the crisis may result in many self-sufficient partnerships that try to escape from the rule of dominant hierarchies and project their fears or illusions to fatal data in the future. This depends on the way of thinking of an organized man. Future forecasted by the Maya calendar assumes only what comes from the mankind itself – either in the direct or indirect way. You can mention here and old proverb: “What we will seed, that we will harvest”. That is why it is necessary to consider the work on the education and spirituality development as a contribution to the health of the whole globe as fundamental.

The author expresses his deep gratitude and thanks all people for providing possibilities to contribute to the God’s plan and for enabling such approaches.
